**Subject:** RE: Notes from the Superfund DD, OEM, OEA and PAD call on August 19

The procedures we have developed with our PAD are similar to what R2 is using:

1. The phone duty officer notifies appropriate SFD supervisors and managers and PAD when an EPA OSC and/or contractors are deployed to an incident. An EPAOSC.NET website is created and website/content is password protected (private). With Removal Manager approval, Response agencies and stakeholders (elected officials, EPA contractors, Responsible Parties) may be provided access to information at this time.
2. SFD and PAD begin coordinating and approving response information and evaluating the level of public interest (monitoring media coverage, gauging elected official(s) interest and needs of the impacted public) to determine the appropriate public dissemination tool of incident information.
3. For up to the initial 2 days of the response, the website and content (POLREPS, photos, tactical information) will remain private to allow time to fully evaluate the best mechanism for information dissemination. If necessary, managers may extend the 2 day period by a day or so.
4. Generally, after 2 days, once the OSC receives supervisory approval of the content, the OSC will make website public. Incidents that continue to have an elevated level of public interest undergo coordinated review and approval by SFD and PAD prior to making content public on EPAOSC.net
